

# PAPER FILTERS

With over 25 years of producing the highest quality air filters, cabin filters, and now eco style oil filters, our manufacturer has 5 plants in China, producing in excess of 10 million filters annually. They are an ISO9001 accredited OEM supplier, and offer the largest selection of cabin filters in the world.

In spite of this they show strong environmental responsibility, wastage is kept to an absolute minimum and recycling is carried out wherever possible.

## Manufacturing

- All filters are designed and produced to be a direct OEM replacement in terms of style, fit and performance.
- All tooling, whether for rigid polypropylene filters or flexible poly-urethane filters, is produced in-house ensuring total control of accuracy and quality.
- Although a high level of automation is used, manual input and checks ensure consistency and quality, with every operator also a quality inspector with the power to accept or reject.
- After assembly and quality testing, the filters are then printed, packaged and boxed in your brand ready for direct shipping.

## Quality Control

- The high quality finished products are a result of a combination of high tech equipment and high attention to detail in the manual processes.
- High quality media paper is individually specified for each application.
- 100% of completed filters are manually quality checked before packaging.
- Each cabin filter is individually sealed in a welded polythene bag to ensure that it is fresh when first used.

From factory to National Distributor - tailored to your needs

- Filters can be printed with your brand, logo and part number
- Filter paper can be supplied in a range of colours
- Cabin filters are available with plain or carbon impregnated paper
- Quick development time of new references
