

# STABILISER LINKS

With over 40 year's experience of producing quality automotive suspension components, our manufacturer is considered to be one of the best in the industry. Their product range covers all European, Japanese and Korean and American vehicles. Conforming to ISO9001 and TS16949 international quality standards, their reputation has been built by paying exceptional attention to detail and 100% product quality inspections.

## Manufacturing

- All stabiliser links are developed directly from OEM samples.
- Manufactured in modern factories with exceptional levels of care in Taiwan.
- Specialist sub-suppliers used to ensure that components such as ball pins are manufactured to the highest standard.
- All assembly and welding is carried out in-house.

## Quality Control

- All suppliers and material are regularly checked for conformity and quality.
- All incoming goods are carefully checked against specification.
- 100% inspection at every stage of production.
- All stabiliser links are hardness and fatigue tested, and welds are tensile strength tested. This is done in their own modern laboratory.
- Many joint bars are manufactured with larger diameter than OE for extra strength and durability.
- All newly developed stabiliser links undergo an extensive accelerated durability test programme before being released for production.

From factory to National Distributor - tailored to your needs

- Links can be laser etched with your part number
- Links are available in a choice of black or gold finishes
- Wide range for all makes
- Quick development of new references
